

BLUE AND WHITE

CEMENT SERIES

BLUE&WHITE, THE GEM IN CERAMICS

The application of cement in modern industrial space and the pursuit of functionalism and minimalism has driven cement tiles to be a widely-used material in decorative space. But a too casual application approach makes no room for cultural connection. With Element Blue and White series, art and culture are revived within originality and simplicity.

Cleaning And Maintenance

Special Cleaning Or Deep Cleaning

Clean the floor with a rough cloth soaked in lukewarm water and basic detergent for organic dirt (grease, oil, foods) and acid detergent for inorganic dirt, cement and limescale. At the end of this process, rinse the floor with clean lukewarm water.

Detergents

You may use any detergent available on the market, at the prescribed concentration, with the exception of hydrofluoric (HF) acid or its compound. However, it is always advisable to test the resistance of the material on a small area first, in order to avoid alterations to the floor surface.

Grouting And Final Cleaning

Grouting And Final Cleaning

When using normal drying adhesive, grout the floor after 24-48 hours, when using rapid drying adhesives, grout after 4 hours.

When working with polished materials in particular, use cement grouts of a matching tone, avoiding dark color grouts with oxide materials, and vice versa.

When grouting these surfaces, it is advisable not to use flexible mortars made from synthetic materials (Flexughe), especially if the color contrasts that of the material, and not to use additives/latex. In fact, these products make it extremely difficult to remove any residue using normal cleaning products. If using grouts with contrasting or special pigments, take care to follow the information provided in the specifications and test the grout on the material before hand.

Use a rubber-coated spatula to apply the grout over the entire surface of the material.

Grout small areas at a time, removing excess quantity with damp sponges or clothes (using clean water only) or specific equipment for removing excess grout, while the layer of grout is still damp.

Adequate initial cleaning is fundamental to get the best shining and to ensure cleanliness and easy everyday maintenance. Initial cleaning should therefore be performed immediately after laying, using acid-based products, scrubbing and rinsing with plenty of water. This will make it possible to remove any grout, adhesive and cement residue, etc. You may use any detergent available on the market, with the sole exception of products containing hydrofluoric acid (compounds and derivatives) as provided for by standard EN 14411.

We recommend protecting the laid flooring carefully. When carrying out other operations such as painting, plumbing or other work, we recommend covering the floor with PVC sheets, airballs or fabrics once it has been laid.

APPLICATIONS

	 Indoor commercial settings with heavy foot traffic	 Indoor commercial settings with light foot traffic	 Residential settings	 Indoor wall coverings	 Outdoor floor settings	 Countertops
