Great Nature | Inside Equals Outside

GRANITE

GRANITE

Granite. Magma, which is under the earth's crust, often takes the form of igneous rock after cooling. Granite with dense homogeneous structure is harder than marble. It is a very good building material, because of beautiful in appearance, hard-wearing quality, and never go out of style. Granite has maintained its reputation as "the king of rock", due to the unique physical characteristics and beautiful veins on the surface. This is a growing trend that granite is widely use to be building material from ancient times to the present in public area, commercial space and home decoration for example, Egyptian Pyramids, Greek Temple, Roman Coliseum, Beijing Monument of the People's Heroes, Lanzhou yellow river mother stone carving and so on.

Origin

The history of using stone could be traced back to the era of human origin, when people have learned to use stone as a weapon.

Rise

Because of the extremely high hardness, excellent features and rich reserves, from long ago, the stone as a common decoration materials, brings great changes to human in extraordinary decoration and architectural art.

Development and Limitations

Up to now, granite is still one of the most important building materials. However, there are some limitations in its performance, which is not suitable for the needs of modern development.
